CrowdStrike Unifies ASPM with CNAPP to Stop Breaches from Code to Cloud

May 6, 2024

AUSTIN, Texas--(BUSINESS WIRE)--May 6, 2024-- **RSA Conference 2024 –** CrowdStrike (Nasdaq: CRWD) today announced the general availability of CrowdStrike Falcon® Application Security Posture Management (ASPM) as an integrated part of CrowdStrike Falcon® Cloud Security. With this release, CrowdStrike delivers on its bold vision to simplify and scale modern cloud security through a single, unified platform so Cloud SecOps can operate with the speed and agility of DevOps.

Cloud intrusions have surged by 75% over the past year, increasing the pressure on SecOps teams that are already grappling with a shortage of skilled personnel and the inefficiency of numerous disjointed tools. With the native integration of ASPM into Falcon Cloud Security, CrowdStrike is driving consolidation across SecOps with a unified platform that enhances risk visibility and protection across the entire cloud estate, from infrastructure to applications and the services running inside of them, enforcing comprehensive, code-to-runtime security. With this release, CrowdStrike is advancing the market and setting a new standard for what customers can expect from a comprehensive CNAPP.

“The complexity of cloud environments and rapid pace of changes creates misconfigurations and vulnerabilities that adversaries increasingly exploit. Disjointed point products and fragmented platforms create gaps in security defenses that can lead to a breach,” said Karan Gupta, head of engineering, CrowdStrike. “With the integration of Falcon ASPM with Falcon Cloud Security, we’re providing one platform that provides comprehensive risk visibility and workload protection across the entire cloud estate. This revolutionizes CNAPP with integrated ASPM and provides organizations with a blueprint that bridges the gap between their security and development teams.”

The Strategic Leader in Cloud Security Sets a New Standard

CrowdStrike unifies the critical CNAPP capabilities that define modern cloud security in a single, cloud-native platform, delivering the deep visibility, integration into DevOps workflows and rapid incident response capabilities teams need to manage and respond to incidents and secure complex cloud infrastructure and applications with priority and context.

Validated as a market leader by multiple industry analyst firms, CrowdStrike extends its strategic leadership and sets a new standard for modern cloud security with unified CNAPP capabilities from a single agent and single platform that delivers:

- **Business Threat Context:** SecOps teams can immediately understand and prioritize the high-risk threats and vulnerabilities that target sensitive data and the mission-critical applications that are the foundation of an organization.
- **Deep Runtime Visibility:** With comprehensive monitoring across runtime environments, security teams can rapidly identify the security vulnerabilities across cloud infrastructure, workloads, applications, APIs, GenAI and data to eliminate security gaps and stop breaches.
- **Runtime Protection that Stops Breaches:** Fueled by industry-leading threat intelligence, Falcon Cloud Security detects and prevents cloud-based threats in real time, delivering the security outcome customers need most – stopping the breach.
- **Industry Leading MDR and CDR:** By unifying industry-leading managed threat hunting with deep visibility across cloud, identity and endpoints, CrowdStrike’s Cloud Detection and Response (CDR) speeds detection and response across every stage of a cloud attack, even as threats move laterally from cloud to endpoint.
- **Shift Left Security:** By embedding security early in the application development lifecycle, Falcon Cloud Security enables teams to preemptively address potential issues, streamlining the development process and boosting efficiency across development and security operations.

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world’s most advanced cloud-native platform for protecting critical areas of enterprise risk – endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.
